

Isis Subtitle Preview Generator

Generates visible captions on browse media

This software generates a permanent overlay of closed caption World System Teletext, or open subtitles onto Windows Media video files. This enables preview copies of a broadcast file to be processed quickly and easily and avoids the need for any external video processing hardware. The resulting preview copy can be electronically transferred to a client (or burnt to a DVD) and used for client approval, or for non-broadcast material that requires burnt-in subtitles.

The software operates via an intuitive drag and drop user interface and supports industry standard caption file formats.

Key features

- User friendly GUI with drag and drop file management screen

Inputs

- Windows Media or SpectreView encoded MPEG video files
- Closed caption file in EBU .stl format or open subtitle Sonic Scenarist .sst format - other file formats supported on request

Outputs

- Windows Media video file with burnt in subtitles

PC requirements

Operating system - Microsoft Windows 7 or Windows 2008 R2 server.

The PC hardware should have the following minimum specification: 3 GHz Pentium class processor, 1GB RAM and Windows Media player 9 or above

Licensing

The application is protected by means of a hardware security dongle. In multiple system networked environments, a central server licensing model is used to distribute licences as required.
