

AUDIO DESCRIPTION FILE QC SERVICE

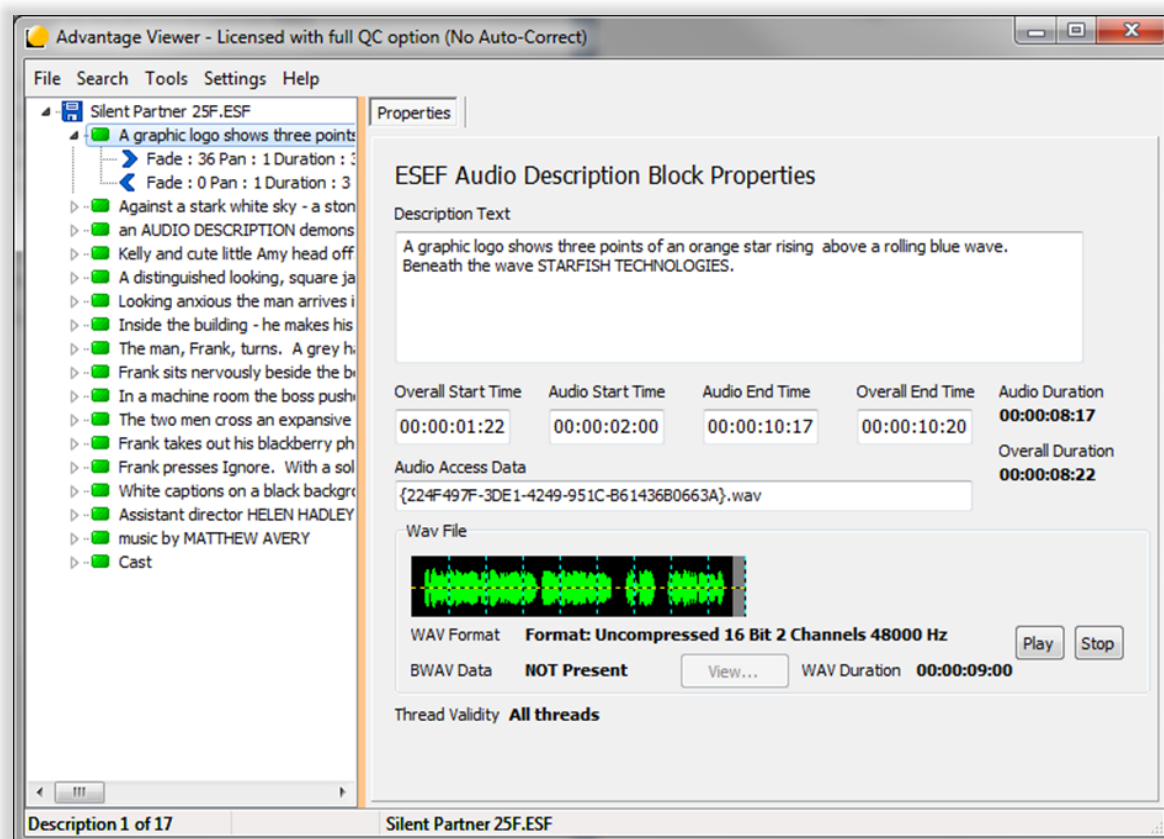

An automated service application for quality checking industry standard Audio Description ESEF files.

The Advantage AD File QC Service is a Windows based software application for automatically quality checking industry standard ESEF Audio Description files. There are a number of options available that include multiple folder configurations and auto correct of common file problems. The application runs as a Windows service and will automatically process any file that appears in the 'Source' folder - which operates as a Watch folder. Files are then examined and moved to either a 'Pass' or 'Fail'

folder and a report created in a Text or HTML format.

The application includes a comprehensive file viewing capability that includes viewing the script text, previewing a rendered WAV file graphic and listening to the recorded WAV description file.

It will prove useful to anyone involved with the creation, editing or processing of audio description for broadcast, DVD or web delivery.

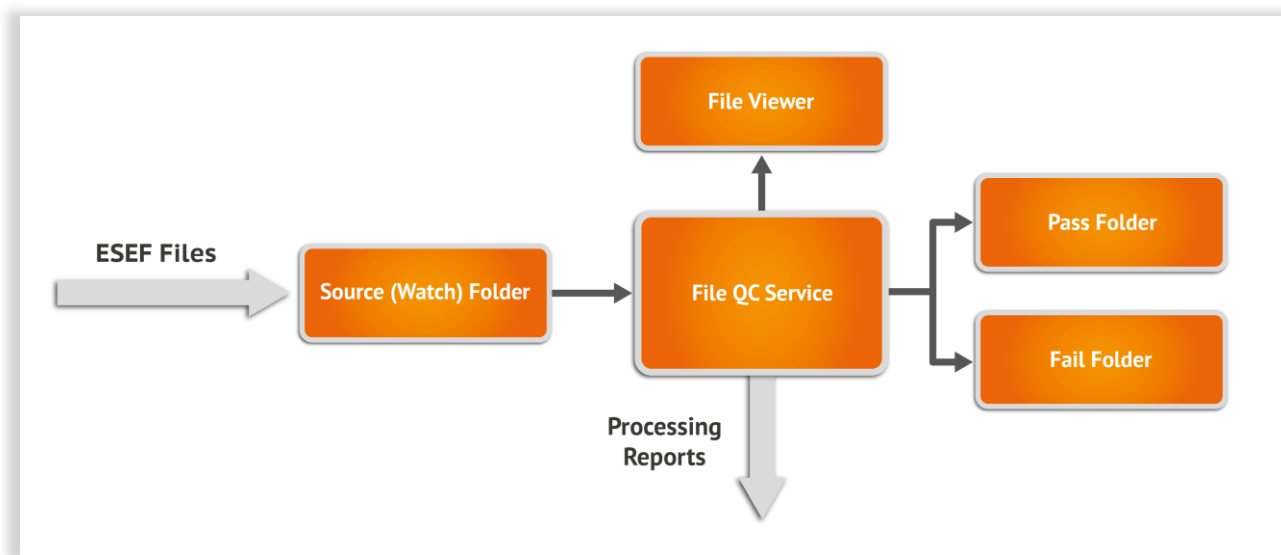

KEY FEATURES

- Runs as an automated service
- Comprehensive reports with options for automated e-mail delivery
- Supports multiple QC folder sets
- Operates on industry standard ESEF files

Comprehensive QC includes:

- Validity of header block information
- No overlap on description timecodes
- All timecodes are within the expected range

HARDWARE REQUIREMENTS

Operating system - 64 bit, Microsoft Windows 10, or Windows Server 2016 or later. The PC hardware should have the following recommended minimum specification: Intel i5 or dual-core Xeon processor at 2.5GHz (or equivalent AMD processor) and 8GB of RAM.

Licensing - The application is protected by means of a hardware security dongle. In multiple system networked environments, a central server licensing model is used to distribute licences as required.
