

Starfish Technologies at NAB 2017
24 - 27 April, Las Vegas Convention Center

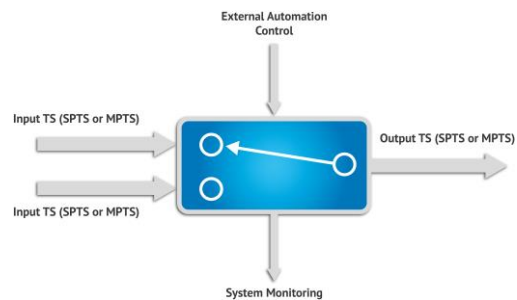

We're very excited about the show this year, for a number of reasons, and I hope you can make time to come and see us at Booth N5924.

Launch of Transport Stream Switch at NAB

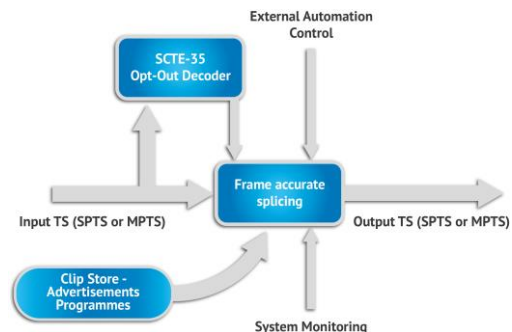

First of all, we're officially launching "TS Switch", a new, very impressive software-based product that we've developed for a wide range of transport stream switching applications, including upgrading legacy hardware based installations. It incorporates sophisticated algorithms and data manipulation techniques and has already received glowing feedback from customer evaluations.

You will get to see it for the first time at NAB, and I urge you to do so.

TS Splicer enhancements

We've also further extended the capabilities of TS Splicer by adding support for multiple programme transport streams (MPTS), an SDI output option, and expanded our already wide range of control protocols to aid with simple integration.

We now have a US sales and support office!

And finally, we are very happy to announce that our US presence just became much stronger with the announcement that we have joined forces with Bridge Digital, a Nashville-based service and support business that will provide professional services and technology support for TS Switch, TS Splicer, and future offerings from Starfish.

Who from Starfish should I ask for at NAB?

Peter Blatchford

Sales & Marketing Director

Graham Neden-Watts

Managing Director
