STARFISH LAUNCH NEW TRANSPORT STREAM PROCESSING PRODUCTS AT CABSAT 2015

Reading, UK, February 2015...Starfish Technologies, a company pioneering innovative technologies and systems in the field of regional television and ad insertion for broadcasters, will be launching some of its new Transport Stream processing products at CABSAT 2015. Starfish will be exhibiting with the UKTI on stand C3-44.

In addition to the TS Splicer (a GOP boundary, or frame accurate splicing system with minimal propagation delay) Starfish will also show the first product from a new range of Transport Stream processing technologies. The TS Monitor is a software application that operates on live or pre-captured Transport Stream files. It displays a full breakdown of all the PIDs in the stream including type, number and the current timestamp. PCR discontinuities are detected and Continuity Count errors are flagged. DVB subtitles and teletext can be decoded and displayed in the user interface video window.

The CABSAT exhibition will be held at the Dubai World Trade Centre from March 10th - 13th.

###

About Starfish Technologies

Founded more than ten years ago, Starfish Technologies has an excellent reputation for meeting international broadcasters' expectations with innovative products and systems. Starfish solutions are proven in service and have been implemented by an impressive list of international customers.
